

Summary/Meeting Advice

- Focusing on core functionality is a good idea, but adding additional features such as events should be manageable
- About tagging/grouping items - shouldn't worry about this too much
- About including a map - not necessary, we can also come up with another representation
 - Could use Google Maps or similar API
 - Will receive email from TA for details
- Better to get started earlier on programming if you can
 - Make sure you're ready a few days before deadline for MVP and final product
- About proof of concept - don't worry about stylization
- About scale of project - won't change much, maybe adding group functionality would be a big difference if we want to reduce scale

New Decisions/Changes

- Cut back/consolidate concepts in sketch/project pitch
- Four concepts: Fridges, Items, Participation/Points, and Friends
- Browsing/Listing/Requesting Items consolidated
- Organizing events pushed aside as optional
